Removable braces

- Removable braces can widen the jaw to accommodate teeth.
- They can align the upper and lower dental arches during child growth period to improve the bite.

Fixed braces

- Fixed braces achieve single tooth movement through the brackets. This ensures perfect tooth position.

Modern braces with brackets are efficient, aesthetically pleasing and comfortable

- Bioenergetic turbo brackets.
- Mini titanium brackets.
- Invisible braces [behind the teeth].

QM – Quality management

What to expect on your first appointment

You visit us with your parents and just have a look around the surgery.

Your mum or dad fill in a form with your name and personal details. While they are doing this, you can read or use our playstation if you are bored.

Then you accompany your mum or dad into a treatment room, where I will look in your mouth to see what, if anything, needs to be done at this stage.

Sometimes it is still too early for a brace, and then you won't have to return until about a year later.

On the practical side, here's what we do

- First of all we take photos and x-rays of your teeth.
- Then we take a dental impression of your teeth to make a plaster model.

After that I will explain which brace is the best for you and when treatment will start.

Then I design a brace and put together a treatment plan especially for you. On your next visit I will explain everything to you in simple terms.

Surprising comfort Custom-fit braces

- Bioenergetic turbo braces**
This innovative brace system is gentle and self-ligating. This special high-tech brace design consists of a slide mechanism, making teeth adjust more freely, more comfortably, with less pressure and therefore working more effectively.
- Arch-wires with memory application**
These appliances correct teeth more quickly and comfortably. The results are even teeth and an enhanced facial profile.
- Mini titanium brackets**
Are biocompatible in combination with nickel-free arch wires, and are eminently suited for patients with allergies.

Aesthetics

- Braces with ceramic brackets**
We offer all types of cosmetic treatment. The best solution for discerning patients are braces with tooth-coloured ceramic brackets.

Protection and safety

- Use of the most modern digital x-ray technology.
- Spezial enamel protection by sealing of bracket areas.
- Safety during sport with gum-shield.
- Saliva swab test to determine risk of caries.

Lasting Results

- Permanet stabilisation of tooth correction with a fixed retainer behind the teeth [Lifelong Retention].
- Translucent retainers are also an alternative.
